### **Speaker:**

Greg Elstad has been in the electrical industry for the past 15 years serving distribution, end users, engineers and educational institutions. Greg has provided numerous seminars to the electrical trade including data termination, fire stopping products, electrical test equipment safety, and lock out tag out to name a few. His classes are manufacturer neutral and his interest is offering an entertaining and informative topic for his customers.

Greg Elstad's seminars have received CEU accreditation in South Dakota, North Dakota, and Minnesota.

### **Description:**

This seminar will provide a clear view in the important questions and considerations when it comes to the purchase and use of test equipment in today's electrical industry. We will discuss the understanding and importance of Category ratings and various safety procedures for electrical applications.

### **Goals:**

Attendees should walk away with a new appreciation and understanding how to choose their next tester. Price should not be their first consideration when finding the right tool. This class will provide them with the appropriate questions to ask when they purchase their next meter.

### **Requirements:**

Licensed electricians, technical students, and maintenance repair individuals will benefit from this class most.

### **Resources:**

An informative power point discussing safety and applications based on today's standards

### **Evaluation:**

It is the intent of the instructor to provide an informative, current, and entertaining class from which the attendee can gather information to assist him/her in their career.
