

# ATLAS LIFTING & RIGGING

ATLAS LIFTING & RIGGING IS A GLOBAL LEADER IN INNOVATION AND MANUFACTURING OF CHAIN HOISTS WITH ITS CORPORATE HEADQUARTERS BASED IN THE UNITED STATES. WE HAVE DISTRIBUTION CENTERS AND REPAIR CENTERS STRATEGICALLY LOCATED ACROSS THE US AND HAVE EXCLUSIVE PARTNERS IN EVERY CONTINENT OF THE WORLD.

Atlas Lifting & Rigging with over 270,000 sq. ft. of manufacturing, has one of the most advanced manual hoist manufacturing facilities in the world. Our manufacturing principles and philosophies are based on European and American standards.

The origins of our engineering, manufacturing and strict quality control processes trace back to centuries of German engineered and production techniques. We have blended hundreds of years of European and American hoist manufacturing expertise with today's cutting-edge engineering technology and advanced manufacturing to create a hoist that is designed to be the Strongest, Safest and Most Reliable hoist possible.

OUR COMPANIES HAVE A PROVEN TRACK RECORD OF PROVIDING THE HIGHEST QUALITY AND MOST RELIABLE MANUAL HOISTS IN THE WORLD. FOR DECADES OUR COMPANIES HAVE SUPPLIED MANUAL HOISTS TO SOME OF THE MOST WELL-KNOWN AND RESPECTED COMPANIES AROUND THE GLOBE.

Many years ago, the founder of ALR had a vision of how his companies could change the future of the global hoist industry. He saw that the world was becoming much more connected and there was an opportunity to do something that had never been done before.

He envisioned building a line of hoists that would be unmatched in the industry. He would then deliver his products direct to local distributors around the globe. He could deliver the best technology the industry has to offer at an affordable price to every jobsite in the world.

#### **BUILT TO HANDLE THE TOUGHEST JOBS**

- Atlas Lifting & Rigging Premium hoists are designed for pulling, lifting and positioning loads on the toughest job site. Whether your jobsite is an oil rig, a construction site, a fab shop, a shipyard or any other tough workplace, we have you covered.
- Our Premium chain hoists are engineered for the harshest of environments and deliver exceptional durability to meet your toughest demands.
- Packed with a patented US-Made EXTREME APPLICATION lubricant that will keep you working in the harshest environments and extreme temperatures.
- Our ultimate strength is more than 4 times Workload Limit (WLL) meeting structural requirements for use in tough applications. Every hoist is tested and certified to 150% of rated capacity.
- The Load Carrying Side Plates carry most of the load on a hoist. Our side-plates are 20% stronger because we upgraded to alloy steel rather than carbon steel like all the competition. This gives our product the strongest structure in the industry.
- Unlike most manufacturers, our hoists have a drop forged and then welded pinion shaft with Titanium for ultimate strength to give another layer of structural integrity that other competitor don't offer.
- We are committed to building the strongest hoist in the world.

#### BUILT TO KEEP YOU SAFE

- Every Atlas hoist is tested manually and by machine to meet our strict manufacturing requirements. Most manufactures test randomly.
- Loaded with industry leading safety features to keep you safe on the job site.
- Compact design to be light weight and durable for confined spaces and heavy loads.
- Heavy duty cast hook latches designed to allow user to actuate the latch easily without putting a finger into the hook opening which will keep your fingers from being injured and will keep your load in place and keep you safe.
- We are one of the only manufacturers to have all our manufacturing and batch identification marking on our hooks to give you complete traceability
- We are committed to building the safest hoist in the world.

#### **BUILT TO LAST**

- Atlas Lifting & Rigging Premium hoists are built to the highest tolerances and with the best materials so you know it will last. We are committed to building the best hoists in the world.
- We upgraded everything on our hoists US-made Extreme Grease, Gears, Bearings, Braking System, Load Carrying Side Plates, Chrome Plated Corrosive Resistant Internal Parts, Welded Pinion Shafts, Handle Grips, Hooks, Safety Latches, Chain.. You name it and we have upgraded it.
- We are committed to building the most reliable hoist in the world.

## Top reasons why Atlas Lifting & Rigging is one of

the STRONGEST, SAFEST, and MOST RELIABLE hoists in the world.

#### High Performance **USA Blue Grease**

This Premium American Made blue grease is specifically formulated to excel in extreme conditions, such as: High operating temperatures, Contaminated environments (water, dust). Heavy loading, Extended relubrication intervals.

RELIABILITY

#### Zinc "Flake" Coating

We are one of the only manufacturers to use "Zinc Flake" coating on crucial parts. The use of this type of coating gives our hoist the ability to last in extreme environments such as in or around saltwater.

In extensive Salt Spray testing, our hoists last more than 200 hours before rusting appears. Most of our competitors will only last 30 hours before rusting appears.

- RELIABILITY

#### **Upgraded High-**Strength Alloy Side **Plates**

The Load Carrying Side Plates carry most of the load on a hoist. Our side plates are 20% stronger because we upgraded to alloy steel rather than carbon steel like

most competitors. This gives our product the strongest structure in the industry.

- STRENGTH

#### Welded Structural Stay Bolts

Our Lever Hoists have structural stay bolts welded directly to the side plate instead of simply fastening them like most competitors. This is a crucial upgrade to the lever hoist that increases strength and safety by a large factor.

- STRENGTH

#### **Quick Hook** Replacement Design

The top hook of our chain hoist is easy to remove from the body of the hoist, making it easier to replace hooks that have been stretched or otherwise damaged due to an overload condition.

The bolt holding the hook in place can be removed without disassembling the hoist body. This new configuration minimizes the hoist's headroom; plus, it makes the ALR hoist the better choice as a dedicated trolley-mounted hoist.

- RELIABILITY

#### Forged Identity Markings

We are one of the only manufacturers to have our manufacturing identifying marks and production date codes, plus the hook's rated capacity, embedded on the sides of the hook during the drop forge operation.

Traceability is a key component of being an ISO certified manufacturer of hoists.

- SAFETY

#### **Heavy Duty Cast Steel** Safety Latch

This new Heavy-Duty cast-steel safety latch design bulks up the base of the latch where the torque and side load stresses are greatest, this is where ordinary stamped latches fail and will bend out of compliance.

The latch also has a bolt-and-lock nut connection which simplifies changing latches in the field.

> - STRENGTH - SAFETY - RELIABILITY

#### Sintered Brake System on all ALR Hoists

We have upgraded all our hoist to come standard with a Sintered Braking System. The design starts with applying high heat and pressure to copper, a high-performance metal. Other materials and metallic particles are then fused together to give the brake pad its extraordinary strength. The result is a brake system that won't crack, shatter or absorb moisture and holds up to the heaviest hoist loads

- SAFETY

#### **Quick Adjust Free** Spool Feature

Engineered to allow for quick hoist positioning, our lever hoists have a new and innovative way to adjust without accidently freewheeling under load. Our hoist does not have to be underload to adjust with the ratchet unlike our competitors hoists which must have a load on the hoist in order to adjust the length of the chain with the ratchet.

- SAFETY

#### **Drop Forged Pinion Shaft**

Our lever hoist pinion shafts and washers are drop forged with Titanium embedded into the metal creating a single strong shaft for ultimate strength. Most manufacturers simply add a washer onto their pinion shafts.

- STRENGTH

#### Caged & Sealed **Roller Bearings**

Caged and Sealed Roller bearings provides smooth, controlled operation of the gears and shafts. This ensures maintenance-free lubrication and increased efficiency

- STRENGTH

#### **Hook Strength Pads**

Small Raised Pads - At the base and tip of each hook are permanent measuring points to check the hook's throat opening for signs of "stretching"- an indication that the hoist has been overloaded and that the hook should be replaced.

- STRENGTH

#### Heavy-Duty Black Phosphate Chain

We manufacture our own hardened link type steel load chain. It is 100% load tested and has an industry leading Black Phosphate Finish which delivers Maximum Corrosion protection compared to ordinary black oxide and nickel plating. Our load chain has smaller, more compact links that are 20% stronger than Grade 80 load chain.

- STRENGTH

#### Chain Stop Grip

The ergonomically designed and black phosphate coated cast chain stop used in our level hoists is more comfortable to grasp than the ordinary O-Ring. The design prevents the load chain from feeding through the hoist body and has the same highly corrosion resistant and scratch resistant coating that's applied to the Load Chain.

- SAFETY

Every ALR Hoist meets or exceeds OSHA and ANSI / ASME H\$T-3 Standards

#### **All-Steel Construction**

Impact resistant all-steel construction ensures added durability and protection while providing a long and dependable service life in toughest environments.

#### **Compact Handle Design**

Built to last new handle design allows for maximum power and lower head room for those tight quarter jobs.

#### - RELIABILITY

#### High Performance USA Blue Grease

This Premium American Made blue grease is specifically formulated to excel in extreme conditions, such as: High operating temperatures, Contaminated environments (water, dust), Heavy loading, Extended relubrication intervals.

#### - RELIABILITY

#### **Quick Adjust Free Spool Feature**

Engineered to allow for quick hoist positioning, our hoists have a new and innovative way to adjust without accidently freewheeling under load. Our hoist does not have to be underload to adjust with the ratchet unlike our competitors hoists which must have a load on the hoist in order to adjust the length of the chain with the ratchet. – SAFETY

#### Welded Structural Stay Bolts

Our Lever Hoists have structural stay bolts welded directly to the side plate instead of simply fastening them like most competitors. This is a crucial upgrade to the lever hoist that increases strength and safety by a large factor.

#### - STRENGTH

#### Sintered Brake System On All ALR Hoists

We have upgraded all our hoist to come standard with a Sintered Braking System. The design starts with applying high heat and pressure to copper, a high-performance metal. Other materials and metallic particles are then fused together to give the brake pad its extraordinary strength. The result is a brake system that won't crack, shatter or absorb moisture and holds up to the heaviest hoist loads. – *SAFETY* 

#### Weston-Style Brake System

Weston-Style load brake system has a Chrome Plated twin ratchet pawl brake design to reduce rusting. Fusing one brake disc to each side of the pawl allows the load to be divided between two disc and helps eliminates premature brake-disc failure. – RELIABILITY

#### **Upgraded High Strength Alloy Side Plates**

The Load Carrying Side Plates carry most of the load on a hoist. Our side-plates are 20% stronger because we upgraded to alloy steel rather than carbon steel like most competitors. This gives our product the strongest structure in the industry.

— STRENGTH

#### **Drop Forged Pinion Shaft**

Our lever hoist pinion shafts and washers are drop forged with Titanium embedded into the metal creating a single strong shaft for ultimate strength. Most manufacturers simply add a washer onto their pinion shafts.

— STRENGTH

#### Caged & Sealed Roller Bearings

Caged and Sealed Roller bearings provides smooth, controlled operation of the gears and shafts. This ensures maintenance-free lubrication and increased efficiency – STRENGTH

#### Relaxed Grip Handle Design

Our new lever handle grip features an ergonomic non-slip hilt at the base that guards against losing your grip on the tool.

Molded from a unique engineered thermoplastic, this new grip provides a soft, tactile surface that "relaxes the grip" to reduce fatigue, yet durable enough to survive years of use and exposure to the elements. – SAFETY

Optional Overload Protection prevents lifting or pulling damaging loads beyond the rated capacity of the hoist and when triggered, as well as injury to personnel. Overload Protection is set at approximately 150% of rated and can be reset on site.

- SAFFTY

#### Forged Identity Markings

Premium Powder Coated Finish

We are one of the only manufacturers to have our manufacturing identifying marks and production date codes, plus the hook's rated capacity, embedded on the sides of the hook during the drop forge operation. Traceability is a key component of being an ISO certified manufacturer of hoists.

#### - SAFFT

#### Heavy Duty Cast Steel Safety Latch

This new Heavy-Duty cast-steel safety latch design bulks up the base of the latch where the torque and side load stresses are greatest, this is where ordinary stamped latches fail and will bend out of compliance. The latch also has a bolt-and-lock nut connection which simplifies changing latches in the field.

#### - STRENGTH - SAFETY - RELIABILITY

#### Heavy Duty Black Phosphate Chain

We manufacture our own hardened link type steel load chain. It is 100% load tested and has an industry leading Black Phosphate Finish which delivers Maximum Corrosion protection compared to ordinary black oxide and nickel plating. Our load chain has smaller, more compact links that are 20% stronger than Grade 80 load chain.

#### - STRENGTH

Chain Stop Grip

The ergonomically designed and black phosphate coated cast chain stop used in our level hoists is more comfortable to grasp than the ordinary O-Ring. The design prevents the load chain from feeding through the hoist body and has the same highly corrosion resistant and scratch resistant coating that's applied to the Load Chain.

#### - SAFETY

#### **Hook Strength Pads**

Small Raised Pads - At the base and tip of each hook are permanent measuring points to check the hook's throat opening for signs of "stretching"—an indication that the hoist has been overloaded and that the hook should be replaced.

#### - STRENGTH

#### 360-Degree Hook Rotation

The 360 Degree swivel hook design allows the operator to work in confined spaces with quick and easy positioning of the hoist in any directions.

#### - RELIABILITY

#### Optional Shipyard Hook Shipyard Hooks are designed with blunt tips for point loading and engineered to help eliminate stretched hooks.

- SAFETY

#### Quick Hook Replacement Design

The top hook of our chain hoist is easy to remove from the body of the hoist, making it easier to replace hooks that have been stretched or otherwise damaged due to an overload condition.

The bolt holding the hook in place can be removed without disassembling the hoist body. This new configuration minimizes the hoist's headroom; plus, it makes the ALR hoist the better choice as a dedicated trolley-mounted hoist.

#### - RELIABILITY

#### STRENGTH

- Atlas Lifting & Rigging Premium hoists are designed for pulling, lifting and positioning loads on the toughest job site.
- Engineered for the harshest of environments and delivering exceptional durability to meet your toughest demands.

#### SAFETY

- Loaded with industry leading safety features to keep you safe on the job site.
- Compact design is light weight and durable for confined spaces and heavy loads.

#### RELIABILITY

- Built to the highest tolerances and with the best materials so you know it will last.
- We Upgraded everything on our hoists US-made Extreme Grease, Gears, Bearings, Braking System, Load Carrying Side Plates, Chrome Plated Corrosive Resistant Internal Parts, Welded Pinion Shafts, Handle Grips, Hooks, Safety Latches, Chain.. You name it and we have upgraded it.

OVERLOAD PROTECTION ADDS AN EXTENDED LAYER OF PROTECTION TO THE USER OF THE HOIST AND THE HOIST ITSELF.

It's not uncommon for a worker to rig a load without knowing the exact weight of what they are lifting. Overload protection prevents lifting or pulling damaging loads beyond the rated capacity of the hoist and when triggered, as well as injury to personnel.

OVERLOAD PROTECTION
WILL ACTIVATE AT
APPROXIMATELY 150%
OF RATED LOAD.

LEWER HOIS

The ALHC Series compact hoist is built tough and will fits in a toolbox. Great for construction, plumbing, HVAC, electrical work and ATV use.

Available in ¼, ½ and ¾ Ton capacities and will easily handle most applications where weights are under 1 ton. This is a must have tool for any toolbox. When you have something that needs to be lifted quick and easily, there is no better tool to have by your side.

#### **All-Steel Construction**

Impact resistant all-steel construction ensures added durability and protection while providing a long and dependable service life in toughest environments - STRENGTH

#### Compact Handle Design

Built to last new handle design allows for maximum power and lower head room for those tight quarter jobs - RELIABILITY

#### 360-Degree Hook Rotation

The 360 Degree swivel hook design allows the operator to work in confined spaces with quick and easy positioning of the hoist in any directions - *RELIABILITY* 

#### Weston-Style Brake System

Weston-Style load brake system has a twin ratchet pawl brake design. Fusing one brake disc to each side of the pawl allows the load to be divided between two disc and helps eliminates premature brakedisc failure - RELIABILITY

#### **Heavy Duty Cast Steel Latch**

This new Heavy-Duty cast-steel safety latch design bulks up the base of the latch where the torque and side load stresses are greatest, this is where ordinary stamped latches fail and will bend out of compliance. The latch also has a bolt-and-lock nut connection which simplifies changing latches in the field - STRENGTH

#### Relaxed Grip Handle Design

Molded from a unique engineered thermoplastic, this new grip provides a soft, tactile surface that "relaxes the grip" to reduce fatigue, yet durable enough to survive years of use and exposure to the elements - SAFETY

• Every unit is inspected and tested to 150% of rated capacity before leaving the factory in accordance with ASME B30.21 requirements.

PMGT LEWER HOUS

#### **Premium Powder Coated Finish**

Featuring a specifically designed long lasting powder coat finish for harsh environments. – *RELIABILITY* 

#### **Overload Protection**

Optional Overload Protection prevents lifting or pulling damaging loads beyond the rated capacity of the hoist and when triggered, as well as injury to personnel. Overload Protection is set at approximately 150% of rated and can be reset on site. - SAFETY

#### High Performance USA Blue Grease

This Premium American Made blue grease is specifically formulated to excel in extreme conditions, such as: High operating temperatures, Contaminated environments (water, dust), Heavy loading, Extended relubrication intervals. – *RELIABILITY* 

#### Welded Structural Stay Bolts

Our Lever Hoists have structural stay bolts welded directly to the side plate instead of simply fastening them like most competitors. This is a crucial upgrade to the lever hoist that increases strength and safety by a large factor. – STRENGTH

#### Sintered Brake System On All ALR Hoists

We have upgraded all our hoist to come standard with a Sintered Braking System. The design starts with applying high heat and pressure to copper, a high-performance metal. Other materials and metallic particles are then fused together to give the brake pad its extraordinary strength. The result is a brake system that won't crack, shatter or absorb moisture and holds up to the heaviest hoist loads. – SAFETY

#### **Oversized Sintered Brake System**

All of our chain hoist 5 ton and larger come with an oversized "Sintered Brake System" is specifically engineered for "Heavy Loads". If the contact area of the braking system is too small, it will cause overheating and failure. We have oversized the crucial components to create more contact area for braking. – *SAFETY* 

#### Weston-Style Brake System

Weston-Style load brake system has a Chrome Plated twin ratchet pawl brake design to reduce rusting. Fusing one brake disc to each side of the pawl allows the load to be divided between two disc and helps eliminates premature brake-disc failure. – *RELIABILITY* 

#### **Upgraded High Strength Alloy Side Plates**

The Load Carrying Side Plates carry most of the load on a hoist. Our side-plates are 20% stronger because we upgraded to alloy steel rather than carbon steel like most competitors. This gives our product the strongest structure in the industry. – *STRENGTH* 

#### **Quick Hook Replacement Design**

The top hook of our chain hoist is easy to remove from the body of the hoist, making it easier to replace hooks that have been stretched or otherwise damaged due to an overload condition.

The bolt holding the hook in place can be removed without disassembling the hoist body. This new configuration minimizes the hoist's headroom; plus, it makes the ALR hoist the better choice as a dedicated trolley-mounted hoist. – RELIABILITY

#### Caged & Sealed Roller Bearings

Caged and Sealed Roller bearings provides smooth, controlled operation of the gears and shafts. This ensures maintenance-free lubrication and increased efficiency. – STRENGTH

#### Forged Identity Markings

We are one of the only manufacturers to have our manufacturing identifying marks and production date codes, plus the hook's rated capacity, embedded on the sides of the hook during the drop forge operation. Traceability is a key component of being an ISO certified manufacturer of hoists. – *SAFETY* 

#### Heavy-Duty Cast Steel Safety Latch

This new Heavy-Duty cast-steel safety latch design bulks up the base of the latch where the torque and side load stresses are greatest, this is where ordinary stamped latches fail and will bend out of compliance. The latch also has a bolt-and-lock nut connection which simplifies changing latches in the field. – STRENGTH – SAFETY - RELIABILITY

#### Heavy-Duty Black Phosphate Chain

We manufacture our own hardened link type steel load chain. It is 100% load tested and has an industry leading Black Phosphate Finish which delivers Maximum Corrosion protection compared to ordinary black oxide and nickel plating. Our load chain has smaller, more compact links that are 20% stronger than Grade 80 load chain. – STRENGTH

#### Chain Stop Grip

The ergonomically designed and black phosphate coated cast chain stop used in our level hoists is more comfortable to grasp than the ordinary O-Ring. The design prevents the load chain from feeding through the hoist body and has the same highly corrosion resistant and scratch resistant coating that's applied to the Load Chain. – SAFETY

#### **Hook Strength Pads**

Small Raised Pads - At the base and tip of each hook are permanent measuring points to check the hook's throat opening for signs of "stretching"-an indication that the hoist has been overloaded and that the hook should be replaced. – STRENGTH

#### 360-Degree Hook Rotation

The 360 Degree swivel hook design allows the operator to work in confined spaces with quick and easy positioning of the hoist in any directions. – *RELIABILITY* 

#### **Optional Shipyard Hook**

Shipyard Hooks are designed with blunt tips for point loading and engineered to help eliminate stretched hooks. – *SAFETY* 

#### STRENGTH

- Atlas Lifting & Rigging Premium hoists are designed for pulling, lifting and positioning loads on the toughest job site.
- Engineered for the harshest of environments and delivering exceptional durability to meet your toughest demands.

#### SAFETY

- Loaded with industry leading safety features to keep you safe on the job site.
- Compact design is light weight and durable for confined spaces and heavy loads.

#### RELIABILITY

- Built to the highest tolerances and with the best materials so you know it will last.
- We Upgraded everything on our hoists US-made Extreme Grease, Gears, Bearings, Braking System, Load Carrying Side Plates, Chrome Plated Corrosive Resistant Internal Parts, Welded Pinion Shafts, Handle Grips, Hooks, Safety Latches, Chain.. You name it and we have upgraded it.

OVERLOAD PROTECTION ADDS AN EXTENDED LAYER OF PROTECTION TO THE USER OF THE HOIST AND THE HOIST ITSELF.

It's not uncommon for a worker to rig a load without knowing the exact weight of what they are lifting. Overload protection prevents lifting or pulling damaging loads beyond the rated capacity of the hoist and when triggered, as well as injury to personnel.

OVERLOAD PROTECTION
WILL ACTIVATE AT
APPROXIMATELY 150%
OF RATED LOAD.

RIMMIONST

This revolutionary patented dual speed chain hoist is equipped with Load Sensing Automatic Speed Transmission which is the first in this industry.

The hoist can lift and lower the load chain 5 times faster than a regular chain hoist when it does not have a load.

When the hoist is loaded, the lifting and lowering speed will be the same as a regular chain hoist. Smooth speed transmissions between high and standard speed without neutral position, which is reliable and safe. The Dual Speed Chain Hoist is equipped with an overload limiter ensuring safe operation.

#### **Automatic Speed Transmission**

Equipped with Load Sensing "Automatic Speed Transmission" which is the first in this field.

#### **Dual Speed**

When the hoist is loaded, the lifting and lowering speed will be the same as a regular chain hoist.

#### 5 Times Faster

When the hoist is not loaded, the lifting and lowering speed are geared for quick load adjustment, making the hoist 5 times faster than a standard hoist.

#### Reliable and Safe

Smooth speed transmission between high and standard speed without neutral position.

#### **Overload Protection**

Equipped with an overload limiter ensuring safe operation.

#### **Light Load Capable**

The dual speed chain hoist can lift loads that are at 2% of the chain hoist rated capacity.

#### Chain Joiner

A unique hand chain joiner is used as a quick and secure method of joining the hand chain without the need to cut, bend, open and close a link of existing hand chain.

#### **Cross Hauling & Fleeting**

The chain hoist is tested and certified for fleeting or cross hauling applications up to 45° from the vertical without deration.

#### Double Pawl

Reinforced double pawl brake system and larger diameter pawl springs ensure reliable brake

#### **Meet and Exceeds Standards**

EN13157, ASNE B30.16 and JIS B8802 standards.

#### **Patented**

USA, Canada, Germany, Australia, China, S. Korea and Taiwan China.

#### Cast Steel Latch

The dual speed chain hoist top and bottom hooks are fitted with heavy duty cast steel latches.

#### **Quick Safety Inspection Indicator**

The dual speed chain hoist top and bottom hooks have overload indicator marks on the hook throat that can be quickly measured for possible overloading.

Spare shear pins

Two pieces of spare shear pins located in the carrying handle

#### Rope clamp system

Easily disengaged with a lever allowing smooth installation of the wire rope

#### High strength cast aluminium alloy body

Light weight
Simple to operate
Smooth contour
Design with large, flat
bottom surface for
increased stability in horizontal as well as vertical working position

Stamped serial number for easy identification
